Introducing the future of USB Wall Power Sockets. Light Switches and power sockets

ENERGY EFFICIENT USB WALL SOCKET

USB Wall Socket has a twin USB powered 5 Volt 3.5 AMP socket and is SAA certified. Perfect for charging mobile phones including ipads, mac air, ipods, tablets, most hand held devices, tools etc. No longer do you need those bulky charging transformers that take up too much room on the socket or go missing. Your device plugs straight in to the USB Wall Socket on the power point and leaves the 2 240v plugs free for your normal home appliances. All our range are direct replacements to the standard Australian double power point. So no messy wiring issues, however a qualified electrician is recommended to do the swap or install. Available in various colours or custom make. Visit our website www.usbwallssocket.com.au
