

# ROTHENBERGER ANZ brings back more innovation to make plumbing easier

ROTHENBERGER ANZ attend ISH 2013 in Germany

Continuing its drive for technical expertise, a team from ROTHENBERGER ANZ recently supported its European counterparts at ISH – the world's leading trade fair for The Bathroom Experience, Building Services, Energy, Air Conditioning Technology and Renewable Energies.

While engaging with the European retailers and end users, the team also investigated the latest offerings in sustainable sanitation, environmentally sound and efficient air conditioning, heating, cooling and ventilation technologies; and future-orientated building solutions.

"We see a big part of our local responsibility being to take advantage of our global network in order to find the best, most innovative products to help the local plumbers by making their jobs easier, work faster and results better" explained Oliver Taylor, Managing Director, ROTHENBERGER ANZ.

Resulting from this expedition, ROTHENBERGER ANZ will launch a number of innovative new tools this year, including the ROLOCK EXPANDER Power Torque tool. The result of 40 years of development, this tool uses ROTHENBERGER proprietary expansion and calibration engineering technology for installing pipelines without fittings. This technology allows pipelines in the sanitation, heating, air conditioning, freezing and gas sectors to be connected cost-effectively without fittings. It also features a new, quick-change system for screw and quick-change heads. Naturally being ROTHENBERGER, it is constructed from the highest quality materials to stringent German engineering guidelines.
