

# SapphireOne Business Accounting Software is an affordable ERP solution with a choice of support plans – Diamond and Platinum

Enticing and competitive pricing plans from SapphireOne CRM DMS ERP Accounting Application Suite

SapphireOne Pty Ltd (SapphireOne) an Australian ERP Accounting Software company, who are constantly searching for ways to upgrade and innovate their SapphireOne application to create an even more powerful tool. They cater for medium to large businesses and understand the needs of accountants and bookkeepers who support them. In the past two decades, SapphireOne has devoted almost \$200 million in research and development to deliver consistently new features with improved functionality.

On 8th October 2018, SapphireOne launches version 17 which will deliver major new enhancements in SapphireOne CRM DMS ERP Accounting Application Suite. This new release of SapphireOne Version 17 supports 64bit version of Windows and Mac OS which sees dramatic speed improvements to memory intensive operations such as Month & Year End procedure, BAS reporting etc. With this release SapphireOne clients will have better data management functionality, improved user experience, a higher-level security with HTTP Strict Transport Security (HSTS), and many more new intriguing services.

Sapphire Single User for Windows or Mac: If you are just one user then Sapphire Single User will suit you. This offer consists of a full working copy of Sapphire application suite that can be accessed by a single user at any given time. SapphireOne Client/Server for Windows or Mac: If you have multiple users, SapphireOne Client/Server will suit your business needs. This license enables multiple concurrent users to access the same data file on their server concurrently. Sapphire Web Pack: The Web Pack comes with a number of standard functions with user access easily controlled by the system administrator. The Sapphire web pack server allows for unlimited users to access controlled parts of the live data file from any device with a browser. Customisation of the Sapphire Custom web pack to suit your business needs is also available on request.

Entry level is SapphireOne's Diamond Support Plan, with unlimited email and phone support. Diamond clients enjoy the convenience of unlimited telephone and email support within normal business hours, and priority booking for Team viewer support. Diamond Clients have access to the current build of SapphireOne ERP & Business Accounting Software Application. SapphireOne's Platinum Support Plan provides unlimited email and phone support 24/7. This premium service provides scheduled backups, month end, GL and transaction audits, data file re-indexing and tools, unlimited email and 24/7 telephone queries by the client's nominated administrator. SapphireOne is now Certified for ISO 27001:2013 Information Security Management Systems. The ISO 27001 standard requires a systematic examination of security risks, threats, vulnerabilities and their impact. SapphireOne has achieved the certification process by demonstrating that a comprehensive system of information security controls and management processes has been implemented. These processes ensure the information security controls continue to meet the organisation's requirements on an ongoing basis. SapphireOne's compliance with this important industry certification demonstrates that SapphireOne develop, implement, train, maintain and support an enterprise resource management application as per ISO Standards.
