

Signed, Sealed & Delivered

New Deal Increases Capacity for Chesterton Customseal Machined Seals Throughout Australia

The recent acquisition of the SKF machined seals Sydney branch allows Chesterton Customseal to expand its footprint. Effective immediately, the company announces an increased ability to supply the nation with the ultimate quality of high-performance elastomeric polymer seals for use across a broad range of applications and industries.

Well-known for the provision of standardised and customised polymeric seals for use in pneumatic, hydraulic and rotary equipment, Chesterton Customseal announces the recent acquisition of the Sydney branch of SKF machined seals.

Chesterton Customseal now becomes a specialised distributor of SKF machined seals for Australia.

This will allow the company to provide a broader coverage throughout Australia, including faster delivery times across the nation. The deal brings with it multiple advantages, both for the company and their customers. The most notable of these is the ability to increase capacity and expand their presence to support the East Coast of Australia.

The Chesterton Customseal HQ remains in Perth, WA. This, combined with the Sydney office, provides a much-increased footprint by which customers across Australia can take advantage of their extensive industry expertise. With bespoke profiles and solutions, SKF machined seals are utilised in hydraulic and rotating equipment within a wide variety of industries. These include Pharmaceuticals, Food & Beverage, Mining, Oil & Gas, Chemical, Steel, Hydropower and Mining.

Chesterton Customseal provide the most advanced engineered plastic solutions. Expanding in this manner allows more flexibility in the creation of seals for even the most challenging of application environments. Seals, especially those used in the harshest of conditions, need to withstand many extremes. These include intense pressure, extremes of temperature and aggressive cleaners, for which SKF machined seals provide the ultimate sealing solutions.

Further merits of this exciting East Coast acquisition allow Chesterton Customseal and their customers to have easy access to a larger array of premium materials. It also increases the expertise of the Chesterton Customseal Australia team. With a focus on hydraulic pneumatic rotary seals, companies and operations throughout the whole continent will benefit from an even faster service than which they've previously been accustomed.

About Chesterton Customseal

Chesterton Customseal is a leading provider of high-performance elastomeric polymer seals used in hydraulic, pneumatic and rotary equipment. The company is committed to the provision of sealing solutions to multiple industries, including Chemical, Steel, Pharmaceutical, Oil & Gas, Food & Beverage and Mining. Using an array of premium materials, they continue to provide innovate sealing solutions along with a commitment to conserve energy and resources throughout the production process.
