

# Unisys Secures \$22 Million Contract to Help Develop Citizen ID Card and Criminal Registry System For Angolan Ministry of Justice

Unisys selected by prime contractor DGM-Sistemas Lda to help Angola reduce fraud and modernize criminal registry system

SYDNEY, September 3, 2008 – Unisys today announced that DGM-Sistemas Lda, an Angola-based information technology company, has awarded a three-year contract, valued at approximately US\$22 million, to Unisys Portugal to help develop and roll out a new citizen ID card program for the Ministry of Justice of the Republic of Angola (Civil and Criminal Identification and Archiving Department). Angola hopes to provide 20 million ID cards to its citizens by 2015 to reduce fraud and modernise the Ministry's Criminal Registry. As one of DGM's key partners, Unisys will provide a secure biometric ID card with automated fingerprint identification capabilities. Unisys will also modernise the department's existing Criminal Justice Registry system, using Microsoft .NET and CRM frameworks. Unisys will create a centralised citizen registry capable of recording demographic details, digital photographs, digital signatures and fingerprint scans captured at fixed and mobile stations. Around three million records with existing biographic information will be migrated to the new application. The new solution will be based on the Unisys Registry and Positive Identification Solutions framework (RAPIDS), which captures biographic and biometric data in real-time, allowing for immediate checks on a person's identity. The infrastructure includes an adaptable workflow engine that will enable Unisys to re-use its Identification & Credentialing framework LEIDA (Library of eID Artefacts software), creating building blocks to accelerate development. Key optical card technology built into the system will be provided by LaserCard. Unisys will also be responsible for creating the solution that will configure and manage the servers, workstations, networking and security in the Ministry's central data centre and disaster recovery site. Unisys has an established working relationship with DGM, having worked collaboratively on a similar electronic ID framework for the Angolan Social Security Ministry, awarded in 2006. "Unisys and DGM-Sistemas form a strong team that will help the Angolan Ministry of Justice meet its security goals," said Francois Fleutiaux, General Manager, South Cluster, Continental Europe, Unisys. "The Ministry's Criminal Justice systems modernisation and its extensive citizen ID card initiative will call upon Unisys core strengths in identification and credentialing, best-of-breed technologies and systems integration and project management skills." About DGM-Sistemas DGM-Sistemas Lda is an Angolan based company with head offices in Luanda and operating across all Angolan national territory. The company has a number of diverse customers in the public and private sectors and operates with international technology partners who provide specialised services. DGM-Sistemas provides clients with customised and integrated solutions that effectively respond to the specific needs of each customer. This initiative reflects DGM's desire to participate in programmes that contribute to the social-economic development of the country. All forward-looking statements rely on assumptions and are subject to various risks and uncertainties that could cause actual results to differ materially from expectations. In particular, statements regarding the anticipated value of the contract are based upon the assumption that the contract continues for its full term. Since DGM can terminate the contract prior to the expiration of its term if the Angolan Ministry of Justice does not provide funding for the project, the value of the contract is not guaranteed. Additional discussion of factors that could affect Unisys future results is contained in its periodic filings with the Securities and Exchange Commission.
