

Verbatim Releases New Range of USB Digital Memory Reader/Writers

With four models available: one for CompactFlash, one for SmartMedia, one for SecureDigital/MultiMediaCard and one for Memory Stick; there is a model to suit almost all digital media applications. High Speed data transfer between your digital memory card and your computer: Max 12Mb/sec transfer rate with the USB connection outpaces traditional serial and parallel port speeds. USB bus powered - no power adapter required. Compatible with Windows and MAC Operating Systems: Supports Windows 98/98SE/2000/ME and MAC OS 8.6 and above. Supports Hot-swapping: You can plug/unplug from your USB port without having to reboot your system. Ergonomic Design: With a small footprint and ergonomic design these reader/writers are easy to use and carry with you. An activity light prevents you from removing the card whilst reading or writing is taking place. Value for Money: With a RRP of \$39 inc GST and packaged in handy hangsell packaging these USB reader/writers are available from authorised Verbatim resellers. About Verbatim Since 1969, Verbatim has been at the forefront of the evolution of data storage technology. Today, more than 30 years later, Verbatim remains one of the most recognisable names in the data storage industry and is an international market leader in the distribution of optical and magnetic media, computer hardware and computer consumables. Evaluation models are available for review by Press. For more information see www.verbatim.com.au.
