

Virbac Australia to present a series of cattle health sessions at this year's Gympie Show

The ever-popular Gympie Show is back – and this year, animal health company Virbac Australia will be part of the line-up as they present a series of cattle health sessions designed to support producers with tips and advice on improving animal productivity and profitability. With cattle ticks in the Gympie region being especially problematic for young weaner cattle, Virbac Australia is running four presentations to help farmers improve the immunity and health of young weaner cattle, as well as identify the best broad spectrum long-acting drench and trace mineral supplements to support them at this critical time in their development. Delivered by Victor Moffroid, Area Sales Manager for the Gympie region, he'll also be demonstrating the correct application method for injectable long-acting drenches and injectable trace mineral supplements. Events run at the Showground Cattle Yards on Thursday May 16th at 12.00pm and 4.00pm, and Friday 17th May at 10:30am and 2:30pm. They're free to attend, and interested media and event visitors are invited to turn up and register on the day. Everyone that registers will go into the draw to win a 200ml pack of Cydectin Long Acting Injection for Cattle, with the winner drawn on Friday 17th May. This year's Gympie Show promises to offer an amazing experience for all, and Virbac Australia is looking forward to being part of what has over the years become a major highlight of the regions agricultural calendar.
